American Urological Association BPH Symptoms Score Index Questionnaire

Having to urinate more frequently, as well as more urgently, can definitely interrupt the flow of your day. You should know that frequent urination is often a symptom of benign prostatic hyperplasia (BPH). A noncancerous enlargement of the prostate gland. BPH is a common condition among men over age 50. Waking up several times a night to urinate and having a weaker, slower, or delayed urine stream are other common symptoms.

Please give completed test to your doctor to determine if you could benefit from BPH treatment.

Circle the number that best applies to you for each question.
